

Satco Quality Containers provide an aesthetic presentation for your product, ensuring low risk of breakage together with a firm and hygienic pack with ease of serving and re-use for the end user.

All this of course adds premium value to your product

Our containers, offered in three convenient sizes, are packed in attractive and durable outers and are also available in red, blue, green and yellow.

Take away containers that are easy to handle, with excellent lid sealing that withstands every filling, delivery and microwave reheating requirement.

Moulded from high grade polypropylene with excellent stiffness and temperature resistance, the SATCO range of containers meets all of the requirement for microwave reheating.

Thoughtful design has considered all the requirements of the restaurant, the consumer and all food packers.

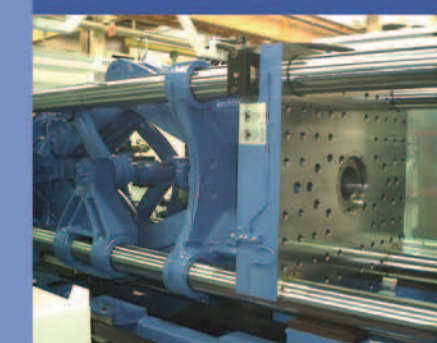

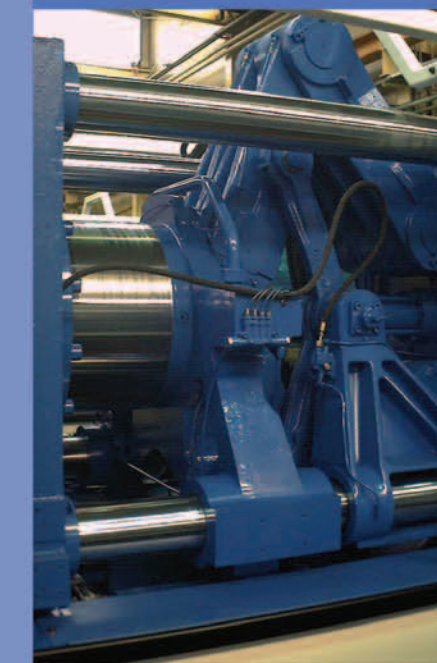

The restaurant has a conveniently packaged range of containers in all of the required sizes. The easily handled and tough container range provides the restaurant owner with:

- Easy to separate stacks of containers. This reduces breakages and cracking of containers. Containers cannot be compressed together due to the design features that have been incorporated.
- Anti-slip, easy to grip feature on sides of container.
- Containers that have strength where you need it, to take side pressures and compression pressures when lids are being fitted.
- Computer generated shape that assists the moulding process, resulting in containers with low levels of stress.
- Snap on lids that are virtually leakproof with sauces and juices.

- The containers stack well during transit
- The lid fit ensures a virtual leak free handling
- The extra strength designed into the container gives better handling when hot - especially after reheating.
- The excellent design and high strength make secondary use for food storage and other items a real possibility. Economic enough to be disposable - strong enough to be re-usable.

The full range of SATCO containers will allow you to maximise the presentation of your food products whilst having cost effective packaging that contributes to the profitability of the restaurants business.

Quality Products

Our production line employs the most up to date injection moulding machines featuring:

- Fully parallel operation during the machine cycle to ensure the shortest possible cycle times
- High speed movements thanks to the use of accumulators supporting all functions
- Highly efficient screw design to ensure the best possible melt, and hence and product quality
- Optimal screw profile to ensure perfect colour dispersion
- Perfect control of the injection process in closed loop, to ensure absolute repeatable product quality
- Highly robust design to ensure reliability and longevity
- Machinery designed for high productivity and with a low maintenance requirement
- Our machinery design supports a high degree of hygiene in the production area
- Ergonomic design to enable rapid and trouble free production changeover
- Highly acknowledged user friendly control system
- Centralised, fully computerised control system to ensure correct management of all setting parameters
- High specification quality control package integrated within the control system
- Integrated production monitoring system to enable automatic logging of setting changes, machine state and alarms to ensure complete tracability of the process.

This advanced technology coupled with our dedication to systemisation and efficiency ensures the highest quality product delivered to you from our purpose designed factory to the most exacting schedules.

Packed in Carton

Clear food container & lids in poly bags

- 250 Microwave Food Container & Lids Size 500
- 250 Microwave Food Container & Lids Size 650
- 250 Microwave Food Container & Lids Size 1000

Coloured food container & lids in poly bags

- 250 Microwave Food Container & Lids Size 650 Red
- 250 Microwave Food Container & Lids Size 650 Yellow
- 250 Microwave Food Container & Lids Size 650 Green
- 250 Microwave Food Container & Lids Size 650 Blue
